Letter of support

Latvian Bioenergy association supports the project “Biomass gasification roadmap for a sustainable and modern bioeconomy (Biocycle)” submitted by Riga Technical University. This project implementation would help complete of two tasks, which are important in the context of sustainable energy sector development in Latvia:

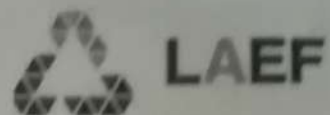

- development of innovative renewable energy technology concept;
- increase of Latvian energy independence and energy safety.

The aim of the research is to investigate biomass gasification process and develop complex roadmap with successful technological solution. One of the project task is define possibilities of using gasification process sub-product (tar and char) as raw material for product with added value.

Letter of support

Latvian renewable energy federation (LAEF) supports the project Biomass gasification roadmap for a sustainable and modern bioeconomy (Biocycle)". This project is submitted by Riga Technical University. The aim of the project is research biomass gasification process and develop technological solution roadmap. Successful implementation of project will help to:

- integrate innovative energy effective technology to energy sector;
- replace imported fossil fuels by local renewable energy sources;
- increase energy safety and independence of Latvian energy sector.

Provider of the opinion,

Chairman of the Board:

Jānis Irbe
