## Support Letter

*To whom it may concern*

Dear Madam/ Sir,

**“Ekodoma”** is an engineering consulting firm whose main activities are related to the development of energy-efficient solutions and the use of sustainable energy resources. **We are conducting environmental assessments and providing enterprises with our expertise.**

**“Ekodoma”** is aware of the project proposal **“Enhancing national economic growth and sustainability through diplomac (BioDIP)”** to be submitted by the Institute of Energy Systems and Environment of the Riga Technical University to the Fundamental and Applied research programme on August 2022.

In line with the project proposal, RTU scientists are planning to develop a roadmap for environmental experts on how to overcome barriers related to the implementation of environmental expert recommendations to production companies. The roadmap will be based on BioDIP research findings. Quantitative sociological data will be analysed and supplemented with qualitative data analysis from acquired interviews. BioDIP will focus on social and behavioural aspects of environment-related decision-making in production companies.

Consequently, **“Ekodoma”** as a **business supporting organization** expresses support for the **“Enhancing national economic growth and sustainability through biodiplomacy (BioDIP)”** project proposal as we are one of the target groups, to whom project results will be useful. We will:

1. Contribute to data gathering, and
2. participate in “BioDIP” hackathon.

**Ekodoma**, managing director  
Agris Kamenders
